

PELLETS VS CHAFF

Extruded pellet diets provide many benefits for your small animal in comparison to a generic chaff mix. Vetafarm's pellets are veterinary-formulated to cater for your small animal's specific nutritional requirements to help them live a healthy and happy life!

Before we go on – What exactly IS extrusion?

Extrusion is a cooking technique that forms our pellets! Unlike cold-pressed pellets, extrusion unlocks palatability, aids digestion and provides added food safety. It creates a uniform pellet that houses all of the essential nutrition for your small animal. Easy to feed, and delicious!

Watch our video on how extrusion works

CHAFF MIXES

Grain and chaff mixes generally use whichever ingredients are available and cheap! Formulation of these mixes varies greatly, meaning your animal is not always getting complete nutrition.

Rabbits & guinea pigs are concentrate selectors, and choose the parts they like. Mixes often contain fillers that your animal won't eat – leaving behind waste and creating nutritional gaps.

Grain and chaff mixes can be made without quality assurance or testing. They can cause gut upsets, and may require additional supplementation.

VETAFARM PELLETS

Veterinary formulated with your small animal requirements at the core. Our pellets are nutritionally complete with the ideal balance of fibre, protein, fats, vitamins and minerals.

Our extruded pellets ensure that all of the nutrition is packed into each tasty pellet so your animal meets their specific requirements – and won't leave a mess behind!

All Vetafarm products are formulated by veterinarians and manufactured under strict quality assurance systems in accredited facilities.

All of our fresh, Australian ingredients are carefully tested before being extruded into pellets, and after! Each product features a guaranteed analysis so that you can take the guesswork out of your small animal's nutrition.
